

19/10/13 - Alliberats PHP 5.5.5 i 5.4.21

El proppassat 17 d'octubre foren alliberades les versions 5.5.5 i 5.4.21 de PHP respectivament.

Respecte la 5.4.21, aquesta versió soluciona 10 bugs de la versió anterior.

Per a mi els pitjors són:

Standard:

- Fixed bug [#61548](#) (content-type must appear at the end of headers for 201 Location to work in http).

CLI server:

- Fixed bug [#65633](#) (built-in server treat some http headers as case-sensitive).

Datetime:

- Fixed bug [#64157](#) (DateTime::createFromFormat() reports confusing error message).

Filter:

- Add RFC 6598 IPs to reserved addresses.
- Fixed bug [#64441](#) (FILTER_VALIDATE_URL rejects fully qualified domain names).

DBA extension:

- Fixed bug [#65708](#) (dba functions cast \$key param to string in-place, bypassing copy on write).

Els podeu consultar [tots al changelog](#).

Respecte la versió 5.5.5 soluciona uns 20 bugs, podeu veure la [llista completa al changelog](#).

Jo destaco els següents errors solucionats, com els més greus:

Core:

- Fixed bug [#64979](#) (Wrong behavior of static variables in closure generators).
- Fixed bug [#65821](#) (By-ref foreach on property access of string offset segfaults)

CLI Server:

- Fixed bug [#65633](#) (built-in server treat some http headers as case-sensitive).
- Fixed bug [#65818](#) (Segfault with built-in webserver and chunked transfer encoding).

Datetime:

- Fixed bug [#64157](#) (DateTime::createFromFormat() reports confusing error message).
- Fixed bug [#65502](#) (DateTimeImmutable::createFromFormat returns DateTime).
- Fixed bug [#65548](#) (Comparison for DateTimeImmutable doesn't work).

DBA:

- Fixed bug [#65708](#) (dba functions cast \$key param to string in-place, bypassing copy on write).

Filter:

- Add RFC 6598 IPs to reserved addresses.
- Fixed bug [#64441](#) (FILTER_VALIDATE_URL rejects fully qualified domain names).

FTP:

- Fixed bug [#65667](#) (ftp_nb_continue produces segfault).

GD:

- Ensure that the defined interpolation method is used with the generic scaling methods.

OPCache:

- Fixed bug [#65845](#) (Error when Zend Opcache Optimizer is fully enabled).
- Fixed bug [#65665](#) (Exception not properly caught when opcache enabled).
- Fixed bug [#65510](#) (5.5.2 crashes in `_get_zval_ptr_ptr_var`).
- Fixed issue [#135](#) (segfault in interned strings if initial memory is too low).

Sockets:

- Fixed bug [#65808](#) (the `socket_connect()` won't work with IPv6 address).

SPL:

- Fixed bug [#64782](#) (`SplFileObject` constructor make `$context` optional / give it a default value).

Standard:

- Fixed bug [#61548](#) content-type must appear at the end of headers for 201 Location to work in http.

XMLReader:

- Fixed bug [#51936](#) Crash with clone XMLReader.
- Fixed bug [#64230](#) XMLReader does not suppress errors.
